

Parchment

A SOULFUL PDF READING EXPERIENCE

“Because reading is a sacred act of connection.”

YOUR DIGITAL SANCTUARY

Most digital PDF readers feel cold, cluttered, and industrial. **Parchment** was designed to change that. We believe technology should fade into the background, allowing the story and the text to take center stage. By recreating the focused, undistracted environment of a physical library, Parchment brings the warmth of real paper to your Android device.

No ads. No pop-ups. Just you and the words on the page.

BUILT ON YOUR RATINGS, FEEDBACK, & PROPER RESEARCH COMFORTING YOUR READING

Designed for the Reader

Every feature is crafted to make your sessions comfortable and immersive.

Warm Paper Aesthetic

A carefully calibrated, soft-amber color palette that drastically reduces digital eye strain during marathon reading sessions.

Crystal Clear Text

Powered by a custom 2× super-sampling rendering engine, your books, documents, and comics remain perfectly crisp at any zoom level.

Deep Night Mode

When the lights go out, switch to a true-dark theme engineered to protect your eyes without losing the contrast of physical pages.

Distraction-Free HUD

The interface is completely gesture-aware. When you start reading, the menus smoothly fade away to give you maximum immersion.

Smart Auto-Outline

Reading an older PDF without a built-in Table of Contents? Parchment dynamically analyzes the text to generate an intuitive outline.

Bilingual Navigation

Seamlessly navigate your entire library with native, multi-script support for English, Urdu, and Arabic document structures.

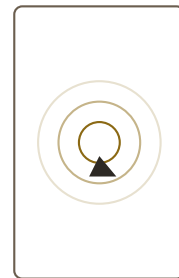

The Interface

To provide you with a completely undistracted reading experience, Parchment uses a **Gesture-Aware HUD (Heads-Up Display)**. By default, all menus and buttons are hidden.

Revealing the Controls

To bring up the navigation bar, settings, and table of contents, simply **tap once in the center of your screen**.

To hide the controls and return to your book, tap the center of the screen again. The UI will smoothly fade away.

Turning Pages

- **Scroll Vertically:** Swipe up or down to seamlessly scroll through the pages.
- **Haptic Feedback:** As you scroll past a page break, you will feel a subtle vibration mimicking the tactile sensation of turning a physical page.

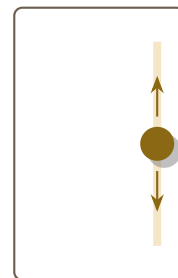

Tools & Comfort

Parchment features a 2× Super-sampling rendering engine. This means your text stays perfectly crisp, no matter how closely you inspect the ink.

The Vertical Zoom Bar

While you can use standard pinch-to-zoom gestures, Parchment includes a custom precision tool.

When the HUD is visible, you will see a slider on the right edge of the screen. **Drag the golden knob up and down** for silky-smooth, one-handed zoom control.

Deep Night Mode

Tap the center screen to open the HUD, then tap the **Gear Icon** to access Settings.

Here, you can toggle **Night Mode**. Our dark theme is engineered with custom HSL tokens to protect your eyes late at night without causing text ghosting or loss of contrast.

| Your Library

A great reader needs great organization. Parchment provides seamless tools to navigate even the largest encyclopedias or textbooks.

Bilingual Table of Contents (TOC)

Open the HUD and tap the **List Icon** to view the chapters.

Parchment natively supports multi-script rendering, meaning your English, Arabic, and Urdu table of contents will align and display flawlessly.

Note: If an older PDF does not have a built-in TOC, Parchment's engine will attempt to generate a Smart Outline for you automatically.

Bookmarks & Page Jumping

- **Saving a Place:** Tap the **Bookmark Icon** in the top HUD to save your current page. It will be permanently stored in your local device settings.
- **Quick Jump:** Tap the page number indicator at the bottom of the screen to open the **Page Jump Dialog**. Type any page number to instantly teleport there.

The Promise

100% Offline. 100% Yours.

In a world of data extraction, Parchment is built differently. We believe your reading habits are your business alone.

- **Zero Tracking:** We collect absolutely no analytics, telemetry, or reading data.
- **Zero Network Calls:** Your books and bookmarks never leave this device.
- **Open Source:** Built for the community, licensed under Apache 2.0.

Enjoy your reading.
